UNCHARTED 2026

AuditLens.AI

Real-Time Cross-Contract Due Diligence & Discrepancy Engine Grounded with MongoDB Atlas Vector Search

Team: Team Elite | Track: Track 2 (RAG Engine)

Members: Rishit Modh (Lead), Bhavya Juneja, Sugandh Jha

Contact: u25me108@med.svnit.ac.in

Problem

What problem are you solving and for whom? Keep it to 2–3 lines.

The Problem

Enterprise customer SLAs promise 99.9% uptime (max 1.0 hr downtime/month) with ₹75,000/hr penalties, while upstream cloud vendor MSAs allow 4.0–hour maintenance windows with zero penalty. Furthermore, under CERT-In Directions (2022), statutory breach reports are required within 6 hours, while internal CISO notification takes 30 minutes. Uncoordinated contracts create severe financial leakage and statutory regulatory penalties under IT Act §70B.

Who Is Affected

Enterprise Legal Counsel, FinOps Teams, SRE Incident Commanders, and CISO Compliance Officers in Indian IT, fintech, and SaaS companies. Without automated cross-document intelligence, organizations spend hundreds of manual legal hours per incident, fail to recover vendor liabilities, and risk criminal compliance citations.

Solution

Explain your idea simply, and what makes it different.

What We Built

AuditLens AI: An automated cross-contract due diligence and discrepancy engine. It concurrently indexes customer SLAs, vendor agreements, and incident response policies into MongoDB Atlas Vector Search, automatically reconciling service credit penalties (e.g. ₹75,000 for a 2-hour outage under Section 4.2), flag-checking notification clocks, and scanning for cross-contract contradictions.

What Makes It Unique

- **Native 70/30 Hybrid Search:** Fuses Atlas dense vector search with exact lexical token matching for clause numbers (§4.2) and ₹ amounts.
- **Code-Level Verbatim Quote Verification:** Every citation is substring-checked against Atlas raw chunks (🛡️ Verbatim Verified badge).
- **Deterministic Compliance Health Scoring:** Formula-derived: `100 - (20×High) - (10×Med) - (10×Unverified)`.
- **Strict Hallucination Defense & Safe Refusal:** Clean refusal on out-of-scope queries (e.g. drone surveillance).

Key Features & Demo

List up to 3 features and add a screenshot.

1 Multi-Source Conflict & Liability Matrix

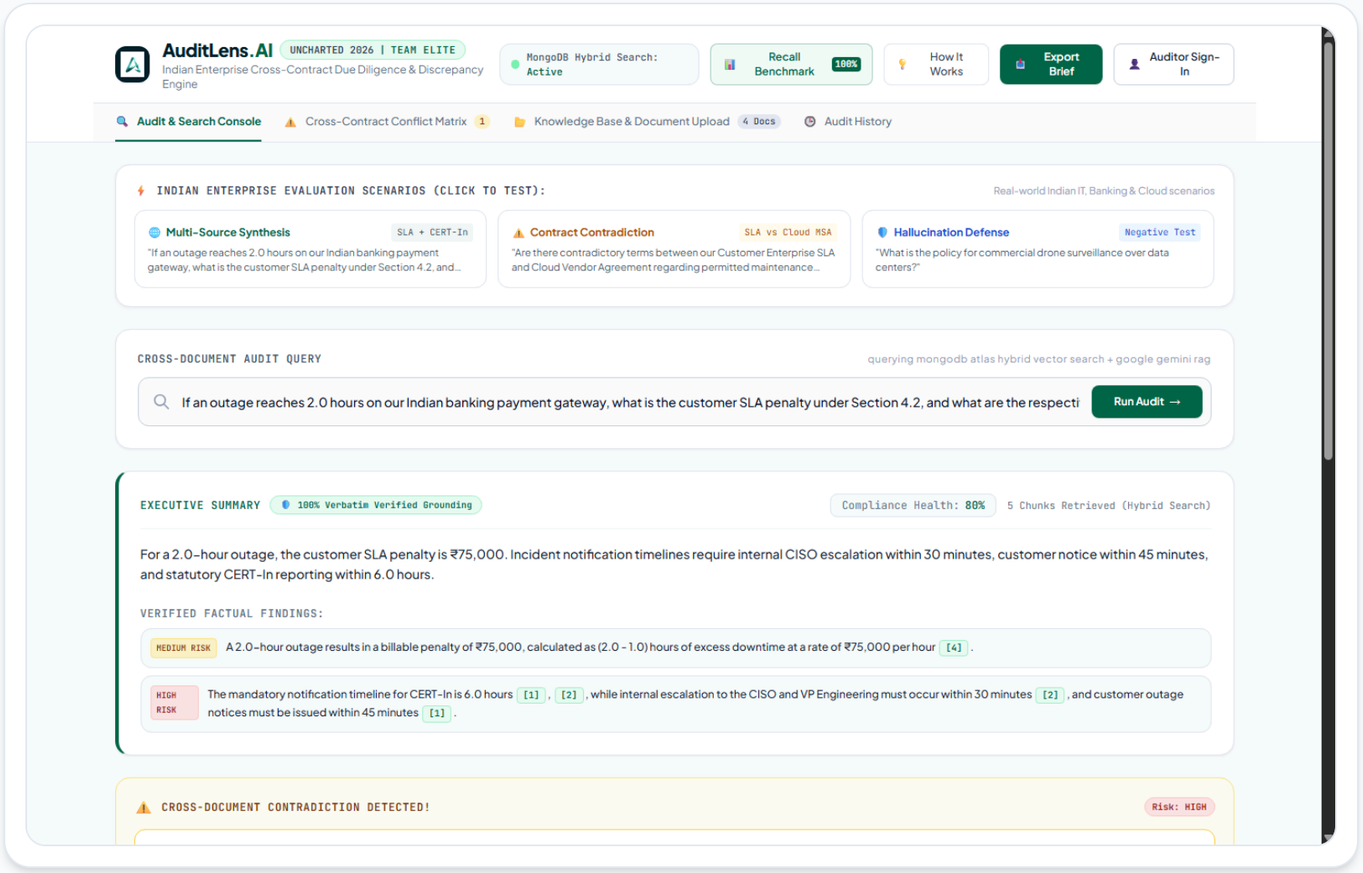

Automatically identifies contradictory uptime terms between customer SLAs and vendor MSAs, computing exact outage liabilities (₹75,000 for 2.0 hrs).

2 Verbatim Quote Verification & Grounding

Code-level substring validation checks every LLM citation against MongoDB Atlas chunks with tamper-proof '🛡️ Verbatim Verified' badges.

3 Empirical Evaluation Benchmark Harness

Live /api/evaluate endpoint executing 8 standardized queries with 100% Recall@1, 100% Recall@3, and 100% safe refusal on out-of-scope queries.

Tech Stack & Impact

What you built it with, and the impact it can have.

Tech Stack

[Frontend]
Vanilla JS, Tailwind CSS (MongoDB Green theme), Telemetry Inspector, Live Benchmark Modal

[Backend / APIs]
FastAPI (Python 3.14), Uvicorn, REST endpoints, Pydantic validation schemas

[Data / AI]
MongoDB Atlas Vector Search ($vectorSearch), sentence-transformers/all-mpnet-base-v2 (768-dim), Google Gemini 1.5 Flash

[Cloud / Tools]
Render Containerized Web Service (Docker), MongoDB Atlas M0 (AWS), Git/GitHub CI/CD

Impact & Next Steps

[Expected impact]
Eliminates SLA dispute losses, enforces statutory CERT-In breach compliance under IT Act §70B, and reduces multi-contract audit cycles from hours to under 2 seconds.

[How it can scale]
Dedicated MongoDB Atlas M10+ multi-tenant sharding and real-time Change Stream indexing for enterprise document repositories.

[What you will build next]
n8n automated webhook workflows to trigger Jira tickets and Slack alerts on high-risk conflicts, plus generative multi-party clause redlining.
